

LAUNCH OF THE SECURITY MULTILOGUE PLATFORM

The ISM-KA Erasmus+ project has developed and launched the **Security Multilogue Platform (SMP)**, an exchange/knowledge tool for public and private security experts.

The Platform was developed by Fondazione FORMIT of Italy in collaboration with the ISM-KA consortium members, between January 2017 and December 2019. It aims at facilitating contact and engagement with and between a wide range of stakeholders in the field of International Safety and Security. The SMP presents a shared environment where safety and security experts can exchange their views and experience by discussing and deepening their knowledge of the topics. Experts can either open and/or participate in the discussion forums covering relevant topics ascribed to specific categories. These topics are updated according to emerging trends on international security management (for example, International Security, Intelligence and Investigation, Organised Crime and Terrorism, Leadership, Security Management, Cyber).

The SMP aspires to become a **reference social network in the security domain**. Most of the content is publicly accessible. To participate actively in the live discussions a simple registration is needed. How to register to the platform can be found by watching this short video: <https://youtu.be/IsqOaq1WO8>

To guarantee a regular update on current and emerging threats for International Security Management hourly updates from accredited sources (e.g. EUROPOL, INTERPOL, UN) are provided to users through **dedicated RSS feeds**, classified according to the abovementioned categories,

The new tool has been developed within ISM-KA, an Erasmus+ co-funded project aiming at establishing an international teaching, learning and knowledge-sharing environment in the field of international safety and security. To achieve this aim, the project has been shaped around the development of a master's programme focused on International Security Management tailored to train the current and next generation of decision makers in the international arena of safety and security.
